Exercise 3. Read the following passage and mark the letter A, B, C, or D to indicate the correct answer to each of the following questions.

In the future, buildings will be built underground for the sake of space and low energy cost. In Singapore, a series of extended tunnels are being constructed to create subways, huge shopping centres, warehouses and offices. Even bus terminals are going below street level. This way, the land above can be freed up for housing, community uses and greenery.

Rising population adds realistic demands for more underground space development. With the expected population of 7 million by 2030, Singapore has invested 118 millions of dollars

in underground technology research and development. It also has reformed the land laws so homeowners can own the underground space to their basements and the deeper land can be used by the government. Recently, it has built the most advanced deep tunnel water treatment plant which can turn 176 million gallons of used water a day.

In Scandinavia, where land is plentiful, moving underground is for the reason of climate. Extremely cold winters would no longer be important when people in Helsinki go down. Warmth under the ground helps warm up water so **they** can take a dip in the environmentally-friendly heated pools. Earthquakes would be only about one-fifth as damaging below the ground. Besides, the basement resource can be used to create pedestrian networks to limit uncomfortable travel and reduce traffic congestion.

The coming cities even have underground farms where agricultural products are made under high-efficiency LED lights, directly beneath homes and offices. Fruits and vegetables become more organic because beneath the earth, most pests are not trouble and as a certain result, pest resistance is **redundant**.

(Adapted from nationalgeographic.co.uk/cities of the future and seequent.com/going underground)

Question 1. In Singapore, the increasing use of the space beneath saves the above ground for _____.

C. Singapore – the city of the future **D.** Why future cities are headed underground

Exercise 4. Read the following passage and mark the letter A, B, C, or D on your answer sheet to indicate the correct answer to each of the questions.

This year, the rainy season arrived earlier than usual, bringing higher volumes of rainfall. Compared to the same period last year, the amount of rainfall in both the southwest and southeast regions has increased by 50-130%, with Soc Trang Province experiencing an alarming increase of 247%. In the Central Highlands, rainfall has risen by 60-70%.

According to Le Dinh Quyet, an official at the Hydro Meteorological Observatory's southern office, the recent storm, Doksuri, has intensified the southwest monsoon, leading to unusually heavy rainfall in the southern region of Vietnam. This increase in rainfall is a result of the southwest winds blowing from the Bay of Bengal towards the mainland. The southwest region, being the first to receive this moisture-laden wind, has experienced **significant** rainfall.

In late July, the Bay of Bengal experienced a tropical storm that caused the southwest monsoon to blow even stronger towards the mainland. The impact of storm Doksuri further intensified the monsoon.

Similarly, storm Talim in mid-July had also contributed to heavy rains and strong winds in Ho Chi Minh City and the neighboring provinces. Although these storms did not directly hit Vietnam, **they** acted as contributing factors in the occurrence of heavier than usual rainfall in these regions.
