Part 2. Read the following passage and choose the best answer A, B, C or D to each of the following questions.

Science and technology is changing the world, and the developments in robotics change the world for humanity. We can already talk with Alexa, Siri, Jibo, Tapia and other personal AI assistants. We can not only direct them to do things around like office work at workplaces or deliver pizza, but also have a real conversation with them. Now as machines are getting better at understanding natural languages, its applications are becoming more important to us. They help us to take notes, do translation, or even do teaching jobs. More than that, robots' hands can handle objects and learning, and it teaches itself to perform various tasks. We can expect robotic **limbs** will soon take a big part of the workload off of humanity's shoulders. For example, in factories, they can do assembling work, carry heavy things around. At home, they can do washing dishes and boring household chores. Robots will be ideal for people who are missing limbs or are disabled in some ways.
