Out of Rainforests

Rainforest is a special, dark place completely different from anywhere else. A rainforest is a place where the trees grow very tall. It is hot and **humid** in a rainforest. It rains a lot in the rainforest, but sometimes you don't know it's raining. The trees grow so closely together that rain doesn't always reach the ground.

Rainforests cover only a small part of the Earth's surface, about six percent. They are found in tropical parts of the world such as South America, Western Africa, Central America, Southeast Asia, Northeastern Australia, and the Pacific Islands.

Rainforests provide us with many things. In fact, the Amazon Rainforest is called the "*lungs of our planet*" because it produces twenty percent of the world's oxygen. Eighty percent of the food we eat first grew in the rainforest. Twenty-five percent of the drugs we take when we are sick are made of plants **that** grow only in rainforests. Some of these drugs are even used to fight and cure cancer. But

sadly, we're destroying rainforests. In fact, 1.5 acres, or 6,000 square meters, of rainforest disappear every second. The forests are being cut down to make fields for cows, to harvest the plants, and to clear land for farms.

Question 21. What is the best title of the passage?

- A. How much oxygen rainforests make B. Kinds of forests
C. Where rainforests are located D. Facts about rainforests

Question 22. The word “**humid**” in paragraph 1 is closet in meaning to _____.

- A. cool and windy B. dry and arid C. cold and icy D. wet and damp

Question 23. Where would you NOT find a rainforest?

- A. North America B. Western Africa C. Pacific Islands D. South America

Question 24. The word “**that**” in paragraph 3 refers to _____.

- A. rainforests B. drugs C. species D. plants
