III. READING

Read the following passage and mark the letter A, B, C or D on your answer sheet to indicate the option that best fits each of the numbered blanks from 1 to 5.

Plants and animals will find it difficult to escape from or adjust to the effect of global warming. Scientists have already observed shifts in the life cycles of many plants and animals, such as flowers blooming earlier and birds hatching earlier (1) _____ the spring. Many species have begun shifting where they live or their annual migration patterns due to warmer temperatures.

With further warming, animals will tend to migrate toward the poles and up mountain sides toward higher elevations. Plants will also attempt to shift their ranges, (2) _____ new areas as old habitats grow too warm. In many places, however, human development will prevent these shifts. Species that find cities or farmland blocking their way north or south may become extinct. Species living in unique ecosystems, such as those found in polar and mountaintop regions, are especially at risk (3) _____ migration to new habitats is not possible. For example, polar bears and marine mammals in the Arctic are already threatened by dwindling sea ice but (4) _____.

Projecting species extinction due to global warming is extremely difficult. Some scientists have estimated that 20 to 50 percent of species could be committed to extinction with 2 to 3 Celsius degrees of further warming. The rate of warming, not just the magnitude, is extremely (5) _____ for plants and animals.

| Question 5. | A. important | B. importantly | C. importance | D. unimportance |

Read the following passage and mark the letter A, B, C, or D to indicate the correct answer to each of the questions below.

Global warming is affecting the entire world. The temperatures are rising, which causes the ice in polar regions to melt. As a result, sea levels are increasing, and low-lying areas are in danger. Scientists have been studying these changes for many years. **They** are researching how we can protect our planet. Green forests are one of the Earth's greatest assets because they provide clean air to breathe. Without these trees, our living conditions would worsen. The forest plays a crucial role in absorbing carbon dioxide.

However, many forests are being cut down at an alarming rate. This deforestation threatens many animals that use trees as shelter. It also affects humans, as we rely on these forests for clean air and water. To ensure a healthy future, more efforts need to be made to stop deforestation. Governments around the world should take steps to protect these natural resources. Many organizations are working to plant more trees.

Climate change also affects the weather patterns. Some areas are experiencing more intense rain, while others face longer droughts. These changes make it difficult for people to grow food and find water. Our seasons are becoming **unpredictable**, which impacts human life and agriculture. Action should be taken by everyone to reduce carbon emissions. We should also be focusing on finding renewable energy sources.

In summary, global warming is a significant challenge. Many changes have already been observed, and more are expected in the future. By working together, we can take steps to lessen the impact. Individuals

and governments should work to ensure a greener, healthier planet. Even small actions, like recycling and using public transport, can contribute to protecting our world.

Question 6. What is the main idea of the passage?

- A. Forests are more important than people realize.
- B. Global warming is a serious issue that requires action from everyone.
- C. Climate change helps scientists understand the Earth.
- D. Sea levels are rising and threatening animals.

Question 7. What does the pronoun “**They**” in paragraph 1 refer to?

- A. Governments
- B. Green forests
- C. Scientists
- D. Individuals

Question 8. What does the word “**unpredictable**” in paragraph 3 most likely mean?

- A. Dangerous
- B. Cannot be guessed or expected
- C. Very long
- D. Helpful to farmers

Question 9. What can be inferred from the passage about forests?

- A. Forests only help animals, not humans.
- B. Forests are only useful in the polar regions.
- C. Forests cause climate change in some areas.
- D. Forests help fight global warming by absorbing carbon dioxide.

Question 10. Which of the following is NOT mentioned in the passage?

- A. Solar panels should be installed on all buildings.
- B. People should recycle more.
- C. Climate change causes extreme weather.
- D. Governments should protect natural resources.
